

FastSet™

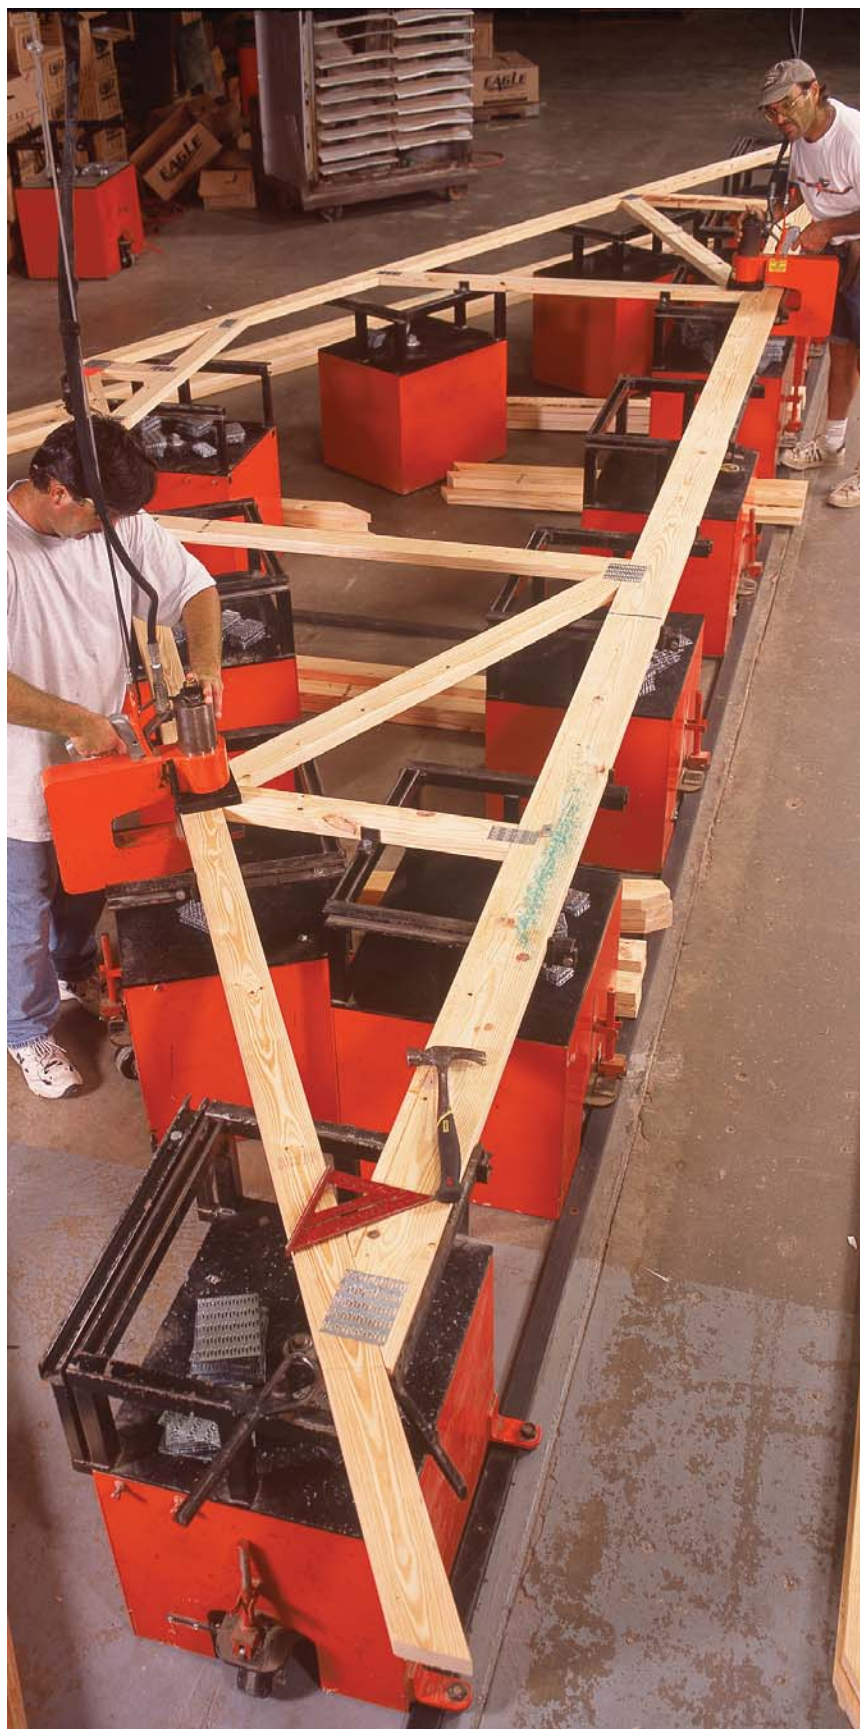

jigging system

Eagle's FastSet™ Jigging System is a series of self-contained pedestals that can be easily moved into position to build any type and size truss needed. Independent pedestals enable truss fabricators to walk completely through the jigging system on setup and unloading of trusses.

Increase your production quality and efficiency with Eagle's walk-through truss system.

Eagle Structural Connector Plates

FastSet™

jigging system

Each pedestal moves freely with the help of heavy duty industrial casters that are built into each unit. Pushing down on the lever locks the unit down and renders it unmovable. Fabricators need only to place pedestals in proper position by taking key measurements, lock them down and start building trusses. The result is high quality trusses, produced with the greatest in labor efficiency.

Peak and heel pedestals can be aligned on an optional steel "T" track that is bolted to your shop floor, enhancing set-up speed and accuracy. Other options available include your choice of three lumber clamping systems. Your quality-built components will have your customers coming back to you again and again!

FASTSET™ JIGGING SYSTEM FEATURES

- LIMITLESS ARRANGEMENT, COMPLETE FLEXIBILITY
- MINIMAL FLOOR SPACE REQUIREMENTS
- 42', 60', AND 80' SYSTEMS AVAILABLE
- ABILITY TO GROW WITH YOUR BUSINESS NEEDS
- HIGH QUALITY WELDING AND FABRICATION
- HEAVY DUTY INDUSTRIAL CASTERS
- UNISTRUT RAILS
- QUICK RELEASE LEVER ALLOWS EASY MOVEMENT
- CHOICE OF THREE LUMBER CLAMPING SYSTEMS
- OPTIONAL AIR CLAMPING SYSTEM

Each pedestal moves freely with the help of heavy duty industrial casters that are built into each unit.

Combined with Eagle Production Presses, the Eagle FastSet™ Jigging System makes for a very fast production system that will produce high-quality building components.
