

Monet DeSauw Finger Jointing System

Wasserman & Associates along with Monet DeSauw have developed the only finger jointing system specifically designed and built for the Wood Component Manufacturing Industry. Turn your wood scrap (2x4 & 2x6) into profit with a positive impact on the environment. Eliminate waste as short as 8" in length and produce saleable studs up to 9' in length. Features include: Shaper with Cut-Off Saw, Glue System, 10' Hydraulic Press with a Trim Saw for 8' & 9' lengths, Installation & Training.

The Shaping Unit can shape up to nine boards in one pass

Shaper will automatically trim angles and square the lumber with its built in Cut-Off-Saw

After being pressed, the hydraulic press will cut your lumber to either 8' or 9' lengths with it's built in Trim Saw

Specifications:

Finger Joint Shaper:

- 19'6"L x 5' 4"W
- 480 volt - 60 amp with disconnect
- 25 HP belt driven cutter head
- Shape up to 9ea 2x4's or 5ea 2x6's
- Perimeter Barrier with Auto Controls
- Internal Cut-Off Blade with Laser Identification mark

Finger Joint Press:

- 16'L x 10'W
- 480 volt - 20 amp with disconnect
- Accommodates 8 and 9 foot standard stud lengths
- 2x4 and 2x6 Material
- 4" Bore cylinder with 2,500 psi max
- Internal cutoff blade in press area
- Pneumatic lumber hold down and push over
- Self contained hydraulic reservoir

Glue Station

QR code for viewing the video on your smart phone.

Glue Station

- 3'2"L x 2'5"W
- 110 volt, 15 amp single phase
- Apquip glue head and valve
- 6 Gallon glue pot
- Tilt head with drain pan

This Finger Jointer is an ideal system that produces studs which can be used in single/multi family homes and commercial construction. Finger jointed studs are directly interchangeable with conventional studs that are used in vertical construction. Finger jointed studs are straight and more consistent than your typical studs. The end result is a high quality wall that is designed to produce fewer nail pops and other related problems, even in hot and humid climates.
